

Testing of markdown/pandoc stuff

First, a simple mermaid graph:

```
graph TD;
  A-->B;
  A-->C;
  B-->D;
  C-->D;
```

More stuff here?

A section here

We want to make sure content within the section and until the next section is somehow toggleable.

Subsections should do their own toggle

This should also be toggleable, and within the bigger toggle.

The next section is here

So some more stuff, here.
